ENERGY STAR® tips to help you save energy

Program your thermostat

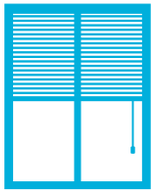
Use your thermostat's pre-programmed energy-saving setpoints when you're asleep or away from home. Smart and programmable thermostats can save about $180 every year in energy costs.

Lower water temperature

Set your water heater thermostat to 120° F or lower to reduce the energy it uses by not overheating water.*

Use a door sweep

Sealing the gap at the bottom of your door to prevent air from escaping your home will keep your home comfortable and prevent increased energy bills.



Use window shading to stay comfortable

Take advantage of the sun's warmth during cold weather by keeping drapes open on south facing windows during daylight hours: close window shades and drapes in warm weather to keep out the sun's heat.

Wash in full loads

Always wait for a full load to run the wash. Reducing the total loads yearly by 25% could save you 3,227 gallons of water.

Fix leaky faucets

One drip per second equals more than 1,600 gallons of water annually.

*Lowering the temperature setting is not recommended if you have a suppressed immune system or chronic respiratory disease.

Find additional ways to save energy at home at **ComEd.com/HomeSavings**.

Individual cost savings are not guaranteed and will vary based on weather, energy usage habits and rates.
Terms and conditions apply. Offers subject to change. Installed products may vary.
This program is funded by ComEd customers in compliance with state law.
